

# Compact Rotor Dispenser 1.0 Part # 1741601

### PRODUCT DESCRIPTION

The volumetric rotor dispenser applies LOCTITE® adhesives, like anaeobics, acrylates and UV acrylates out of a reservoir with high repeatability. The limit of viscosity is 100,000 mPas.

The dispenser is a rotating displacement system. It consists of a rotor and a stator.

The different geometries of the rotor and stator cause the formation of cavities. Rotation of the rotor in the stator generates a flow that is proportional to rotary angle, and so delivery is speed-dependent.

The intrinsic self-sealing capability depends on the viscosity of the adhesive.

Do not operate the dispenser in an explosive atmosphere.

#### **PRODUCT FEATURES**

- Volumetric device, flow rate proportional to speed, electronically controlled.
- Dispenses anaerobics, acrylates and UV acrylates.
- Applications include drop or bead dispensing or potting.
- Integrated Luer lock-adapter with O-ring (patented) ensures sealing in reverse flow!
- Because of the reversible direction of flow (suckback) an exact stop of the product flow can be achieved.
