

# A STRUCTURE IS NOW A STRENGTH BECAUSE OF LOCTITE®

## LOCTITE® PC 7319™ Nordbak® Chemical Resistant Coating

### Challenge:

Rotary equipment in chemical plants often leak of oil and various chemicals. The leakage is absorbed by the concrete floors that holds the rotary equipment in place, leading to a foundational weakness. This means that repairs or a casting of new foundation is needed, causing shutdowns and downtime in that area of the plant.

### LOCTITE Solution:

Cleaning the floors with environmentally friendly LOCTITE® SF 7840™ will remove any grease, oil and cutting fluids left on the floor. PC 7319™ chemical resistant coating can then be applied which is designed to protect concrete against extreme corrosion due to chemical exposure.

### Benefits:

PC 7319™ will retain the strength of the existing concrete foundation and will increase the floor's life cycle. This allows for prolonged equipment life, reduces shutdowns and improves the plant's overall output.

Product	Size	IDH
PC 7319™	11 lb. kit	209816
