Zaradi različnih digitalnih tehnik se lahko barve nekoliko razlikujejo od originalov, zato jih ne moremo obravnavati kot zanesljive barvne predstavitve. Priporočamo, da si avtentične barve ogledate v barvni knjigi. Predstavljena barvna karta se nanaša na vse zaključne sloje in barve, ki jih ponuja Ceresit. Vključuje akrilne, silikatno-silikonske, silikonske, silikatne, elastomerične, mozaične omete in akrilne, silikonske, silikatne, elastomerične barve.

\* Za CT 54 označene barve niso na voljo.

☀️ Vrednost odbojnosti svetlobe/HBW (LRV)

HBW (LRV) – Koefficient odboja svetlobe (odstotek vidnega sevanja, ki se odbije od površine). LRV pokriva območje vidne svetlobe.

TSR – Skupni odboj sončne energije (odstotek sončnega sevanja v celotnem območju, ki se odbije od površine). Faktor se nanaša na svetlobno valovanje v ultravijoličnem, vidnem in infrardečem območju.

Da bi zagotovili dolgotrajno obstojnost fasade in preprečili prekomerno segrevanje površine, je priporočljivo uporabiti omete (zaključne sloje in barve) z vrednostjo odbojnosti svetlobe HBW  $\geq$  20. Glede na uporabljeni izolacijski sistem in zaključni sloj, je možno uporabiti zaključni sloj ali barvo s HBW  $\leq$  20 kot individualno rešitev, odvisno od vrste sistema in zaključnega sloja. Če imajo izbrane barve vrednosti nižje od 20, se je potrebno posvetovati s Henklomovimi tehničnim oddelkom. Aktualne cene zaključnih slojev in barv so na voljo pri lokalnih Ceresit distributerjih.

Barvna paleta vsebuje naslednje izdelke Ceresit: akrilne, silikonske, silikatne, silikatno-silikonske, siliko-elastomerne, elastomerne omete ter akrilne, silikonske in silikatne barve. Zaradi digitalne tehnike in individualnih nastavitve monitorja lahko prikazane barve nekoliko odstopajo od dejanske.

Barvni odtenki Intense so namenjeni za CT 79 elastomerne in CT 76 Solar Protect siliko-elastomerne zaključne sloje proizvajalca Ceresit.

Vrednost odbojnosti svetlobe/HBW (LRV)

HBW (LRV) – Koefficient odboja svetlobe (odstotek vidnega sevanja, ki se odbije od površine). LRV pokriva območje vidne svetlobe.

TSR – Skupni odboj sončne energije (odstotek sončnega sevanja v celotnem območju, ki se odbije od površine). Faktor se nanaša na svetlobno valovanje v ultravijoličnem, vidnem in infrardečem območju.

Za zagotovitev obstojnosti fasade in preprečevanje prekomernega segrevanja uporabljajte zaključne sloje in barve s HBW≥20. Za HBW pod 20 se posvetujte s Ceresit oddelkom za tehnično podporo za pomoč pri izbiri ustreznega izolacijskega sistema.

# Harmonično in Uravnoteženo

Če imate radi vse zelene, bež in bele, jih boste našli tukaj.

Zaradi različnih digitalnih tehnik se lahko barve nekoliko razlikujejo od originalov, zato jih ne moremo obravnavati kot zanesljive barvne predstavitve. Priporočamo, da si avtentične barve ogledate v barvni knjigi. Predstavljeni barvni karti se nanaša na vse zaključne sloje in barve, ki jih ponuja Ceresit. Vključuje akrilne, silikatno-silikonske, silikonske, silikatne, elastomerične, mozaične omete in akrilne, silikonske, silikatne, elastomerične barve.

\* Za CT 54 označene barve niso na voljo.

☀️ Vrednost odbojnosti svetlobe/HBW (LRV)

HBW (LRV) – Koefficient odboja svetlobe (odstotek vidnega sevanja, ki se odbije od površine). LRV pokriva območje vidne svetlobe.

TSR – Skupni odboj sončne energije (odstotek sončnega sevanja v celotnem območju, ki se odbije od površine). Faktor se nanaša na svetlobno valovanje v ultravijoličnem, vidnem in infrardečem območju.

Da bi zagotovili dolgotrajno obstojnost fasade in preprečili prekomerno segrevanje površine, je priporočljivo uporabiti omete (zaključne sloje in barve) z vrednostjo odbojnosti svetlobe HBW  $\geq 20$ . Glede na uporabljeni izolacijski sistem in zaključni sloj, je možno uporabiti zaključni sloj ali barvo s HBW  $\leq 20$  kot individualno rešitev, odvisno od vrste sistema in zaključnega sloja. Če imajo izbrane barve vrednosti nižje od 20, se je potrebno posvetovati s Henklovim tehničnim oddelkom. Aktualne cene zaključnih slojev in barv so na voljo pri lokalnih Ceresit distributerjih.

Zaradi različnih digitalnih tehnik se lahko barve nekoliko razlikujejo od originalov, zato jih ne moremo obravnavati kot zanesljive barvne predstavitve. Priporočamo, da si avtentične barve ogledate v barvni knjigi. Predstavljena barvna karta se nanaša na vse zaključne sloje in barve, ki jih ponuja Ceresit. Vključuje akrilne, silikatno-silikonske, silikonske, silikatne, elastomerične, mozaične omete in akrilne, silikonske, silikatne, elastomerične barve.

\* Za CT 54 označene barve niso na voljo.

Vrednost odboja svetlobe/HBW (LRV)

HBW (LRV) – koeficient odboja svetlobe (odstotek vidnega sevanja, ki se odbije od površine). LRV pokriva območje vidne svetlobe.

TSR – Skupni odboj sončne energije (odstotek sončnega sevanja v celotnem območju, ki se odbije od površine). Faktor se nanaša na svetlobno valovanje v ultravijoličnem, vidnem in infrardečem območju.

Da bi zagotovili dolgotrajno obstojnost fasade in preprečili prekomerno segrevanje površine, je priporočljivo uporabiti omete (zaključne sloje in barve) z vrednostjo odbojnosti svetlobe HBW  $\geq$  20. Glede na uporabljeni izolacijski sistem in zaključni sloj, je možno uporabiti zaključni sloj ali barvo s HBW  $\leq$  20 kot individualno rešitev, odvisno od vrste sistema in zaključnega sloja. Če imajo izbrane barve vrednosti nižje od 20, se je potrebno posvetovati s Henklomovimi tehničnim oddelkom. Aktualne cene zaključnih slojev in barv so na voljo pri lokalnih Ceresit distributerjih.

## Energično in Pozitivno

Tukaj boste našli vso paleto energičnih barv – od rumenih in rdečih preko oranžnih in rjavih do modrih odtenkov.

Zaradi različnih digitalnih tehnik se lahko barve nekoliko razlikujejo od originalov, zato jih ne moremo obravnavati kot zanesljive barvne predstavitve. Priporočamo, da si avtentične barve ogledate v barvni knjigi. Predstavljena barvna karta se nanaša na vse zaključne sloje in barve, ki jih ponuja Ceresit. Vključuje akrilne, silikatno-silikonske, silikonske, silikatne, elastomerične, mozaične omete in akrilne, silikonske, silikatne, elastomerične barve.

\* Za CT 54 označene barve niso na voljo.

☼ Vrednost odbojnosti svetlobe/HBW (LRV)

HBW (LRV) – Koefficient odboja svetlobe (odstotek vidnega sevanja, ki se odbije od površine). LRV pokriva območje vidne svetlobe.

TSR – Skupni odboj sončne energije (odstotek sončnega sevanja v celotnem območju, ki se odbije od površine). Faktor se nanaša na svetlobno valovanje v ultravijoličnem, vidnem in infrardečem območju.

Da bi zagotovili dolgotrajno obstojnost fasade in preprečili prekomerno segrevanje površine, je priporočljivo uporabiti omete (zaključne sloje in barve) z vrednostjo odbojnosti svetlobe HBW  $\geq$  20. Glede na uporabljeni izolacijski sistem in zaključni sloj, je možno uporabiti zaključni sloj ali barvo s HBW  $\leq$  20 kot individualno rešitev, odvisno od vrste sistema in zaključnega sloja. Če imajo izbrane barve vrednosti nižje od 20, se je potrebno posvetovati s Henklovim tehničnim oddelkom. Aktualne cene zaključnih slojev in barv so na voljo pri lokalnih Ceresit distributerjih.

Zaradi različnih digitalnih tehnik se lahko barve nekoliko razlikujejo od originalov, zato jih ne moremo obravnavati kot zanesljive barvne predstavitve. Priporočamo, da si avtentične barve ogledate v barvni knjigi. Predstavljena barvna karta se nanaša na vse zaključne sloje in barve, ki jih ponuja Ceresit. Vključuje akrilne, silikatno-silikonske, silikonske, silikatne, elastomerične, mozaične omete in akrilne, silikonske, silikatne, elastomerične barve.  
\* Za CT 54 označene barve niso na voljo.

✨ Vrednost odbojnosti svetlobe/HBW (LRV)  
HBW (LRV) – Koeficient odboja svetlobe (odstotek vidnega sevanja, ki se odbije od površine).  
TSR – Skupni odboj sončne energije (odstotek sončnega sevanja v celotnem območju, ki se odbije od površine). Faktor se nanaša na svetlobno valovanje v ultravijoličnem, vidnem in infrardečem območju

Da bi zagotovili dolgotrajno obstojnost fasade in preprečili prekomerno segrevanje površine, je priporočljivo uporabiti omete (zaključne sloje in barve) z vrednostjo odbojnosti svetlobe HBW ≥ 20. Glede na uporabljeni izolacijski sistem in zaključni sloj, je možno uporabiti zaključni sloj ali barvo s HBW ≤ 20 kot individualno rešitev, odvisno od vrste sistema in zaključnega sloja. Če imajo izbrane barve vrednosti nižje od 20, se je potrebno posvetovati s Henklomovim tehničnim oddelkom. Aktualne cene zaključnih slojev in barv so na voljo pri lokalnih Ceresit distributerjih.
