Biblioteka kolorystyczna przedstawia następujące produkty Ceresit: tynki akrylowe, silikonowe, silitkowe, silikatowo-silikonowe, silika-elastomerowe, elastomerowe oraz farby akrylowe, silikonowe i silikatowe. Z uwagi na techniki cyfrowe oraz indywidualne ustawienia monitora prezentowane kolory ze wszystkich linii mogą nieznacznie odbiegać od rzeczywistych.

\* Kolorysty nie są dostępne na bazie farby silikatowej CT 54.

Współczynnik odbicia światła / HBW (LRV)

HBW (LRV) – współczynnik odbicia światła (procent promieniowania słonecznego odbitego od powierzchni). LRV obejmuje zakres światła widzialnego.

TSR – współczynnik odbicia całkowitej energii słonecznej [%], czyli ilość promieniowania słonecznego w pełnym zakresie, które zostaje odbite. Współczynnik dotyczy fali światelnej w zakresie ultrafioletu, światła widzialnego i podczerwieni.

Aby zapewnić długotrwałość elewacji i zapobiec nadmiernemu nagrzewaniu się powierzchni, zaleca się stosowanie tynków i farb o współczynniku odbicia światła HBW≥20. W przypadku zastosowania tynku lub farby o HBW poniżej 20 zaleca się indywidualną konsultację z działem technicznym Ceresit w celu doboru odpowiedniego systemu ociepleniowego.

Biblioteka kolorystyczna przedstawia następujące produkty Ceresit: tynki akrylowe, silikonowe, silitkowe, silitkowo-silikonowe, siliko-elastomerowe, elastomerowe oraz farby akrylowe, silikonowe i silitkowe.

Z uwagi na techniki cyfrowe oraz indywidualne ustawienia monitora prezentowane kolory ze wszystkich linii mogą nieznacznie odbiegać od rzeczywistych.

\* Kolorysty nie są dostępne na bazie farby silitkowej CT 54.

❖ Współczynnik odbicia światła / HBW (LRV)

HBW (LRV) – współczynnik odbicia światła (procent promieniowania słonecznego odbitego od powierzchni). LRV obejmuje zakres światła widzialnego.

TSR – współczynnik odbicia całkowitej energii słonecznej [%], czyli ilość promieniowania słonecznego w pełnym zakresie, które zostaje odbite. Współczynnik dotyczy fali światłowej w zakresie ultrafioletu, światła widzialnego i podczerwieni.

Aby zapewnić długofletną trwałość elewacji i zapobiec nadmiernemu nagrzewaniu się powierzchni, zaleca się stosowanie tynków i farb o współczynniku odbicia światła HBW≥20. W przypadku zastosowania tynku lub farby o HBW poniżej 20 zaleca się indywidualną konsultację z działem technicznym Ceresit w celu doboru odpowiedniego systemu ociepleniowego.

Biblioteka kolorystyczna przedstawia następujące produkty Ceresit: tynki akrylowe, silikonowe, silitkowe, silikatowo-silikonowe, silika-elastomerowe, elastomerowe oraz farby akrylowe, silikonowe i silikatowe.

Z uwagi na techniki cyfrowe oraz indywidualne ustawienia monitora prezentowane kolory ze wszystkich linii mogą nieznacznie odbiegać od rzeczywistych.

\* Kolorysty nie są dostępne na bazie farby silikatowej CT 54.

❖ Współczynnik odbicia światła / HBW (LRV)

HBW (LRV) – współczynnik odbicia światła (procent promieniowania słonecznego odbitego od powierzchni). LRV obejmuje zakres światła widzialnego.

TSR – współczynnik odbicia całkowitej energii słonecznej [%], czyli ilość promieniowania słonecznego w pełnym zakresie, które zostaje odbite. Współczynnik dotyczy fali światlowej w zakresie ultrafioletu, światła widzialnego i podczerwieni.

Aby zapewnić długofletną trwałość elewacji i zapobiec nadmiernemu nagrzewaniu się powierzchni, zaleca się stosowanie tynków i farb o współczynniku odbicia światła  $HBW \geq 20$ . W przypadku zastosowania tynku lub farby o HBW poniżej 20 zaleca się indywidualną konsultację z działem technicznym Ceresit w celu doboru odpowiedniego systemu ociepleniowego.

# Energetic & Positive

Najlepszy wybór do odważnych projektów, pozwalający wyróżnić architekturę budynku na jego naturalnym tle.

❖ Współczynnik odbicia światła / HBW (LRV)

HBW (LRV) – współczynnik odbicia światła (procent promieniowania słonecznego odbitego od powierzchni). LRV obejmuje zakres światła widzialnego.

TSR – współczynnik odbicia całkowitej energii słonecznej [%], czyli ilość promieniowania słonecznego w pełnym zakresie, które zostaje odbite. Współczynnik dotyczy fali światlowej w zakresie ultrafioletu, światła widzialnego i podczerwieni.

Aby zapewnić długofletną trwałość elewacji i zapobiec nadmiernemu nagrzewaniu się powierzchni, zaleca się stosowanie tynków i farb o współczynniku odbicia światła  $HBW \geq 20$ . W przypadku zastosowania tynku lub farby o HBW poniżej 20 zaleca się indywidualną konsultację z działem technicznym Ceresit w celu doboru odpowiedniego systemu ociepleniowego.

Paleta zawiera 36 odważnych i intensywnych kolorów zainspirowany naturalnym pięknem klejnotów: od szlachetnych żółci, przez szmaragdową zielń, aż do diamentowej szarości.
