LOCTITE®

LOCTITE® HELPS BOND MODULAR BUILDINGS TOGETHER

LOCTITE® UR 3371
Polyurethane Adhesive/Sealant

Situation:

A manufacturer of modular buildings was grappling with the time and expense required to attach metal thresholds to their floors mechanically. Additionally, they faced a persistent issue with moisture buildup in the flooring. They needed a quicker and more cost-effective solution to install while also effectively preventing moisture accumulation.

LOCTITE® Solution:

The LOCTITE® Technical Sales Engineer recommended LOCTITE® UR 3371. The polyurethane sealant bonded the threshold to the flooring and delivered a flexible, high-strength bond with no additional materials needed. The sealant also reduced the moisture buildup, preventing damage.

Benefits:

LOCTITE® UR 3371 proved to be an effective new solution and replaced mechanically attaching the metal thresholds. Costs were cut, installation time was lowered, and production speed increased. The strong bond of LOCTITE® UR 3371 successfully increased the strength of the threshold and prevented moisture buildup.
