LOCTITE® HELPS DECREASE SLURRY BUILDUP IN PIPES

LOCTITE® **PC 7255™**
SPRAYABLE CERAMIC WEAR RESISTANT COATING

Henkel Adhesive Technologies

Customer Challenge

An Oil & Gas company was having trouble with slurry build up in their pipes. Because they were not using any coatings inside their pipes, they did not have any slickness to avoid the slurry build up. This caused long lead times and high replacement costs. The company was looking for a solution that would decrease the slurry build up, was easy to apply and showed return on investment.

Henkel Solution

The local LOCTITE® expert came in and recommended LOCTITE® PC 7255™, a sprayable wear resistant coating. It protects against turbulence, abrasion and corrosion, providing lasting protection. The pipes were cleaned, sandblasted, and prepared for the solution to be applied. After testing, LOCTITE® PC 7255™ provided the slickness and protection needed in the pipes to avoid slurry buildup for extended periods of time. This showed value to the company by improving reliability, therefore saving time and maintenance costs. LOCTITE® was able to give this company a great return on the investment because of the solution that was used.

Benefits

- Prevention of slurry buildup
- Improved reliability
- Saved time and maintenance costs
