

# CONCRETE REPAIRED IN ONE HOUR DURABILITY DOUBLED WITH LOCTITE®

## SITUATION

Repairing concrete floors has been a difficult issue for a company who has been challenged with the concrete breaking in busy areas, leaving them to constantly fix the damage. The cracked concrete affected a critical high traffic fork lift routine. The previous epoxy repair method disrupted fork lift traffic for 8 hours and repairs failed within a year. This company needed a faster, more durable concrete repair method.

## LOCTITE® SOLUTION

The LOCTITE® Technical Sales Engineer reviewed the customer's concerns and recommended LOCTITE® PC 9410™ Magna-Crete to rebuild the damaged concrete. The area was cleaned of loose debris, then wet with the activator. LOCTITE® PC 9410™ was poured into place. The edges were feathered as it self-leveled. The forklifts were back in operation in one hour.

## BENEFITS

LOCTITE® PC 9410™ cure speed is fast, allowing the forklifts to return to service after 1 hour. This high performance solution doubled the service life to 2 years. The maintenance team found this product made concrete repairs so easy and fast that new concrete repairs are quickly completed before they develop into trip/fall hazards or cause forklifts to drop and damage material.

Product	Size	IDH
LOCTITE® PC 9410™	1 lb	1012500
	1 gallon kit	235572
	5 gallon kit	235573
