Surface Treatment

BONDERITE – delivering value and total surface treatment solutions for all your aircraft and engine requirements

Choose from our broad surface treatment portfolio

Aircraft structures, parts and engines require highquality surface treatment solutions to ensure a safe and reliable fleet for airline operators. Henkel, as a proven surface treatment solutions supplier, provides a broad portfolio of products throughout the aerospace supply chain. It includes cleaners, paint strippers, conversion coatings and engine overhaul products. As a leader in sustainability best practices, Henkel offers environmentally advantaged product options for the aerospace industry's leading platforms.

Benefit from our industry proven expertise

BONDERITE products come along with Henkel's many years of proven aerospace industry experience and know-how. Take advantage and benefit from Henkel's leading products and expertise for your aerospace-grade surface treatment needs.

Covering the entire metal pretreatment process: BONDERITE metal pretreatment solutions

Metal Pretreatment: Essential for the longevity of your airframe and aerospace parts

Before bonding, sealing or painting, aircraft parts require a consistent metal pretreated surface that fulfills all of your process requirements. This includes all stages of metal pretreatment from cleaning and degreasing to conversion coating.

From cleaners to conversion coatings: BONDERITE covers it all

With more than seven decades of metal pretreatment experience, Henkel's BONDERITE solutions cover all steps of the surface treatment process: Cleaners and alkaline etchants for the cleaning phase, deoxidizers and desmutting products for the activation phase and conversion coatings for the surface treatment phase. On the following pages, we will introduce you step-by-step to Henkel's aerospace-grade product offerings.

Metal surface treatment typical process

In a class of its own:

BONDERITE cleaning products

for all your aircraft and component cleaning requirements

No aircraft preparation without cleaning ...

A clean surface is essential for all aircraft applications, as it improves the corrosion performance and optimizes contact bonding and sealing of parts. Henkel's broad portfolio of leading BONDERITE cleaning products provides value and dependability for all our customers' needs.

Based on our long history in supplying the aerospace industry, Henkel provides proven solutions for all your cleaning requirements, accompanied by world-class technical expertise and numerous training modules.

... and no cleaning without BONDERITE.

Henkel's BONDERITE range meets many leading OEM process requirements, with aqueous and solvent-based cleaners to remove dirt, grime or impurities from a surface and to deliver optimal performance every time. With BONDERITE, you will always find the appropriate solution to remove surface contaminants like dirt and grease.

Why choose BONDERITE cleaners?

- > Easy to maintain bath solutions
- > Aerospace grade solutions with OEM qualifications
- > Complete surface treatment product portfolio
- > Long bath life

BONDERITE cleaning products: Facts at a glance

Key factors to consider when choosing the right BONDERITE cleaner

- > All products must meet OEM process specification requirements, as metal parts and gasket seals can be attacked and destroyed by cleaning chemicals
- > Optimal cleaning solution for your process requirements
- > Ensure a clean and "water-break"-free surface
- > Soil types (Organic or Inorganic)
 - » Rust preventives
 - » Lubricants
 - » Oils
 - » Polishing or buffing compounds
 - » Inks
 - » Oxides
 - » Dirt, grease and grime

Cleaners classification

Alkaline Etch (pH > 12)

- Slight to heavy attack of aluminum or metal removal
- Cleaning is enhanced through the evolution of hydrogen gas
- > Provides change to the metal appearance

Acid (pH < 7)

- > Acids chemically break down soils
- > Bath can produce surface attack
- Surface attack is controlled by product concentration, temperature and contact time

Alkaline Non-Etch Cleaner (pH > 10)

> Inhibited solutions

Neutral, Low Alkaline Non-Etch Cleaner (pH 7 – 10)

- > Non-inhibited alkaline solutions
- No adverse effects if allowed to dry on aluminum

Solvent

- Safe to use on a wide array of metals
- Good vapor degreaser
- Ideal wiping cleaner
- May attack painted or plastic surfaces

Description		BONDERITE C-AK 298 [™] AERO is a liquid, non-silicated, immersion cleaner for aluminum and its alloys. It is formulated for use in anodizing and conversion coating lines. It is free rinsing and will remove a variety of soils including oils, greases, inks and wax-based markings.	BONDERITE C-AK 4215 TM NC-LT AERO is a white granular mix developed for cleaning ferrous and nonferrous alloys by spray, immersion and ultrasonic methods at low temperatures. It is ideal for cleaning fuel and hydraulic components, and for cleaning metals prior to metal bonding.	BONDERITE C-AK 4355 TM AERO is a phosphate-free liquid, immersion-applied, non-etching, cleaning product designed specifically to replace halogenated hydrocarbon vapor degreasers for cleaning aluminum alloys. It is formulated for removal of various soils such as oils, greases, inks and wax-based markings. Its superior cleaning characteristics compared to	BONDERITE C-AK 6849 TM AERO is a clear aqueous alkaline degreaser formulated to remove shop soils, marking inks, Cosmoline brand rust preventive, grease and lube oils from ferrous and nonferrous alloys. It offers both exceptional effectiveness and tank life. It replaces solvent-type vapor degreasing fluids with an effective aqueous cleaner. The costs and hazards normally associated

Description		BONDERITE C-AK 5948DPM TM AERO is an alkaline, water-based, blue concentrated compound formulated to effectively clean painted and unpainted aircraft ex- terior and interior surfaces when diluted with water. It is ideally suited for use on all models of jet aircraft and is also designed to be used in immersion tanks for dip applications.	BONDERITE C-AK 5948DPM TM THK AERO is an environmentally advantaged thixotropic, water-based, heavy-duty aircraft cleaner. It is formulated to effectively cling to painted and unpainted aircraft exterior and interior surfaces. It is ideally suited for use on all jets, especially in baggage bins, flap and wheel well areas, and on engines before overhaul. It can be applied as spray or mop.	BONDERITE C-AK 5948R TM AERO is an alkaline, water-based, blue, concentrated compound formulated to effectively clean painted and unpainted aircraft exterior and interior surfaces when diluted with water. It is ideally suited for use on all aircraft large or small parts, and for cleaning engine parts during engine overhaul. It is also designed to be used in immersion tanks for dip applications.	BONDERITE C-AK 4215NC TM AERO is a granular mixture developed to clean aerospace metals, including the ones that come in contact with LOX. It is ideal for cleaning fuel, hydraulic components and articles that require adhesive bonding, anodizing and conversion coatings.

Description		BONDERITE C-IC METALGLO FF RTU AERO is a nonflammable, non-fluoride, acid-based cleaner, brightener, deoxidizer and prepaint conditioner for aluminum. It contains viscosity builders that allow for added contact time, enabling this product to remove corrosion products from horizontal and vertical surfaces. It produces a chemically clean, water- break-free and streak-free surface. It can be applied as spray or brush.	BONDERITE C-AK 5975A TM AERO is a solvent containing high pressure cleaner and can be used on ferrous and nonferrous alloys. It is suitable as an aircraft exterior cleaner.	BONDERITE C-MC 1495 TM X AERO is a medium-heavy duty aircraft polish and cleaner. It quickly removes oxide films.

For a perfect surface finish: BONDERITE etchants

With etchants, you can achieve an optimum surface appearance

As a specialist, you know that surface preparation is fundamental to paint adhesion, surface bonding and corrosion protection. Therefore, for secondary operations, it is important to prepare metal by cleaning and providing a high-quality, fine satin, etched surface.

With BONDERITE etchants, you can take advantage of optimum process benefits

Besides a high-quality etched surface and lighter weight, BONDERITE etchants make sure that the metal is etched away only in exposed areas. You can dissolve metallic aluminum to gain a smoother, uniform surface appearance while providing an extended bath / tank life for your process.

Why choose BONDERITE Etchants?

- > Good for very sharp and defined surfaces
- > Controlled etch rates
- > Achieve surface smoothness
- > Prevent caustic mist from escaping into the workplace

BONDERITE etchants: Facts at a glance

BONDERITE etchants key features:

- Nonflammable
- > Readily mix with cold water
- › Produce minimal amount of soft, non-caking sludge
- > Operations up to 105°C / 221°F
- > Produce uniform etch on most aluminum alloys
- > Easily controlled by simple titration

Key factors to consider when choosing the right BONDERITE etchant

- > Type of alloy
- > Type of chemical milling maskant
- Required specification

Surface preparation

Cleaning

To ensure a uniform etch in the bath containing alkaline etchant, aluminum work pieces must be thoroughly cleaned using a non-silicated cleaner prior to being placed in the etch bath.

Water Rinsing

After cleaning, the metal must be thoroughly rinsed with water, preferably warm. The rinse should be overflowed continuously at a rate which will keep it clean and free from scum and contamination.

	BONDERITE C-AK EC-202L [™] AERO is a liquid alkaline aluminum etch cleaner for immersion applications that will produce a lightly etched finish on aluminum alloys, while simultaneously removing any oils and other soils present on the work surface. It produces a stable foam blanket which effectively entraps the gases evolved during the etching operation. It contains a special blend of detergents and dispersing agents to minimize hard scale formation. Therefore, it makes equipment maintenance a much easier and less costly operation.	BONDERITE C-AK ETCH 9HL [™] AERO is equivalent to a 50 percent water solution of the dry flake BONDERITE C-AK ETCH 9H AERO. It was developed to provide a convenient means to charge and rejuvenate caustic chemical milling baths for aluminum.	BONDERITE C-AK ETCH 17L [™] AERO is a specially compounded caustic etchant for use on the majority of aluminium alloys in the chemical milling process.	BONDERITE C-AK ALUM ETCH 2 AERO is a white granular mixture formulated to clean light soils and etch aluminum by immersion methods. Its solution has a low surface tension which causes a uniform wetting of the metal surface and produces a smooth matte finish on extrusions, structural shapes, aircraft components and similar aluminum parts.

BONDERITE C-AK 5578-GL [™] AERO is a liquid product formulated for alkaline etching on titanium, columbium and tantalum alloys by immersion systems or spray applications. It is an effective etchant prior to adhesive bonding, diffusion bonding, paint- ing, welding and brazing.	BONDERITE C-AK 5578-L TM AERO is an amber liquid compound formulated to clean and etch titanium, columbium and tantalum alloys by spray or immersion systems. It readily removes mill soils, marking inks, lube oils, cutting oil and fingerprints at a low concentration and will etch titanium at higher concentrations. It is an effective etch prior to adhesive bonding, diffusion bonding, painting, welding and brazing.

If it has to be cleaner than clean: Deoxidize and desmut with BONDERITE

Best preparation for bonding and painting: remove everything

For a professional aircraft preparation, oxide layers and smut have to be removed completely before any bonding or painting applications. Both challenges require specific cleaning solutions that consider the alloy and surface condition, the type of conversion coating being used, the environmental regulations and individual customer requirements.

Best choice: BONDERITE

It offers exactly the solution you need. Regarding oxides, the high-quality BONDERITE deoxidizers remove corrosion products as well as heavy storage oxides or residues. At the same time, its desmutting products completely remove surface deposits. In short: You can depend on Henkel to provide solutions for all your surface treatment needs.

Why choose BONDERITE Deoxidizers and Desmutters?

- Complementary chemical solutions
- Proven performance
- > Chrome-free chemical options
- > Solutions for a wide variety of applications

BONDERITE deoxidizing and desmutting products: Facts at a glance

BONDERITE deoxidizers and desmutters will remove oxides and smut from the substrate

- Corrosion products
- > Heavy storage oxides
- > Residues of abrasive cleaning
- > Remnants of shot peening
- > Traces of foreign metal contamination

Necessity of smut removal

Smut is the combination of intermetallics, metals and metal oxides that remain after cleaning and / or etching.

Smut:

- > Is loosely adherent to the surface
- > Will inhibit proper formation of conversion coating
- > Inhibits paint adhesion
- > Contaminates processing solutions
- Initiates corrosion

Key factors to consider when choosing the right BONDERITE deoxidizer and desmutter

- > Alloy and surface condition
- > Type of conversion coating being used
- > Environmental concerns and regulations
- > Equipment and tank availability
- > OEM process requirements
- > Process water conditions

Available types of deoxidizers and desmutters

Nitric-based	Chrome-based	Iron-based	Non-chrome / non-iron based
 Not suitable for silicon alloys (castings) Fluoride needs to be added to improve efficiency 	 Allows for long transfer times Longer bath life than nitric based 	 Environmentaly responsible Good performance 	 Environmentally responsible Aids in copper passivation Regulatory compliance with REACh
 Eventually leads to staining problems 			

> Can cause fuming

Description		BONDERITE C-IC DEOXDZR 6MU TM AERO in a solution of nitric acid or sulfuric acid removes oxides and alkali residues of preceding alkaline degreasing or etching processes on aluminium and its alloys. It is used in an immersion process.	BONDERITE C-IC 2310 TM AERO is a chromium-free concentrated acidic liquid product specifically formulated for deoxidizing and desmutting wrought aluminum alloys. It is extremely effective in removing surface oxides, discolorations due to heat treatment or thermal deburring, and smut which develops during alkaline etching and chemical milling. It develops a stain- free surface on aluminum alloys and is used prior to finishing operations such	BONDERITE C-IC ALDOX® V AERO is a chromium-free, brown liquid formulated to deoxidize, desmut, and lightly etch aluminum alloys. It can be applied as spray or immersion methods that require low surface resistance, prior to anodizing, conversion coating, bonding or welding.	BONDERITE C-IC SMUT-GO® NC AERO is a dark brown liquid formulated to deoxidize and desmut aluminum alloys by spray or immersion methods. It is chromate-free and ideal for processing alloys that require low surface resistance, prior to anodizing, conversion coating, bonding or welding. The nominal etch rates for most aluminum alloys will normally be in the range of 0.02 – 0.10 mils/surface/hour.

First step: surface protection

Whenever a high bare corrosion protection is necessary, an anodization is not possible or a repair coating for small areas is required, you will need a reliable surface treatment before bonding and painting: A protective surface layer created by a chemical reaction between the metal and a chemical solution.

First choice: BONDERITE conversion coatings

Once the conversion coating has been applied as fundamental surface layer, there is no chance to replace it – reason enough to choose high-performance coatings only. With BONDERITE, Henkel offers multiple options in conversion and chemical coatings for all your metal pretreatment processes and for more applications than any other chemical provider. This high-end quality is the reason why our different types of proven BONDERITE conversion coatings are listed in many OEM process specifications.

Why choose BONDERITE conversion coatings?

- > Stabilize metal surface
- > Protect metal surface from corrosion
- > Inhibit corrosion spread
- > Improve paint adhesion and adhesive bonding

BONDERITE conversion coatings: Facts at a glance

Where BONDERITE conversion coatings are used

- > For the corrosion protection of aluminum surfaces
- > For metal pretreatment before bonding and painting
- For high bare corrosion protection

- > Substituting anodization by inappropriate shape of substrates
- As repair coating for small areas
- > For critical military applications according to MIL-DTL-81706B

BONDERITE conversion coatings capabilities

- > Stabilize metal surfaces before and after painting
- Inhibit corrosion spread
- Optimize paint adhesion

Available chemistries:

- > Hexavalent chrome (Cr6+)
- > Trivalent chrome (Cr³⁺)

- Improve adhesives bonding
- Maintain electrical resistance
- > May insulate one metal from another
- > Non-chrome
- > Adhesion promoters

BONDERITE, known as ALODINE[®], conversion coating products per MIL-DTL-81706B, are actively managed by Henkel Aerospace Products and Services with NAVAIR. As required by NAVAIR, Henkel maintains rigorous formulation and manufacturing site control, as well as quality control batch release testing for these MIL-SPEC products. To extend the Henkel warranty and certification, customers are instructed to procure these products from authorized manufacturing sites and from Henkel authorized aerospace distributors. The customers are liable for compliance with its process requirements. For more information on Henkel products and approval sites per MIL-DTL-81706B, visit: www.henkel-adhesives.com/aerospace-distributor.

	BONDERITE M-CR MAGNESIUM AERO contains products formulated for treating magnesium alloys to produce a chromate conversion coating conforming to SAE AMS-M-3171, Type VI. The application method conforms to requirements in NAVAIR 01-1A-509 and is meant primarily for touch-up and corrosion repair processes of magnesium alloys.	BONDERITE M-CR 871 TM AERO is a trichrome dry-in- place conversion coating designed for use on aluminum and its alloys. The applicator used to deliver this product provides an easy and safe method of repairing bare areas of aluminum surfaces. Its proper use reduces worker contact to chemical solutions and decreases wastewater such as rinse water generated from a conversion coating process.	BONDERITE M-CR T5900 [™] AERO treatment develops a complex trivalent chromium conversion coating on aluminum and its alloys, metals coated with IVD aluminum, magnesium, titanium and zinc surfaces. The process provides bare ASTM-B117 salt spray resistance and serves as an excellent base for bonding of paints and adhesives.	BONDERITE M-CR T5900 TM RTU AERO treatment is a complex trivalent chromium conversion coating formulated for treating aluminum and its alloys, metals coated with IVD aluminum, magnesium, titanium and zinc surfaces. This product is formulated as a ready-to-use material for manual spray applications.

BONDERITE M-NT 5200 [™] AERO treatment is a chromium- free product and specifically formulated for treating aluminum and its alloys. It may be used by spray or immersion. The process provides an excellent base for organic finishes.	BONDERITE M-NT 5700 [™] AERO treatment is a chromium- free conversion coating specifically formulated for treating aluminum and its alloys. This product is formulated as a ready- to-use material for spray applications. The process provides an excellent base for organic finishes.	BONDERITE M-NT 8800 TM AERO is a sol-gel coating replacement specifically formulated for increasing adhesion to aluminum and titanium alloys. This product is suitable for spray, brush, and wipe-on applications. The coating produced provides an excellent base for organic finishes and surface preparation for adhesive bonding. It should not be rinsed after application.	

For professional protection of parts: BONDERITE maskants for chemical milling process

Protect all non-etched areas ...

Masking is the process of applying a coating to the metal surface to protect areas which will not be etched. Maskants are used to protect or repair edges, surface damage and cover tooling holes.

... but do it the easy way - with BONDERITE maskants

Why are Henkel's solutions the "easy way of masking"? First of all, because they allow many ways of application: by dip, spray, flow-coat or brush. Secondly, they save working hours as air dry copes with many of these applications. And thirdly, they are easy to remove by hand-peeling.

BONDERITE maskants: Facts at a glance

BONDERITE maskants key features:

- > Solvent-borne and 100 percent Solids (2K)
- > Fast curing
- > No oven drying / curing required
- > Time-saving process

Key factors to consider when choosing the right BONDERITE maskant

- > Sufficient adhesion resistance
- > Chemical resistance

Aircraft depainting is no small task. Unless you choose BONDERITE paint removers

How to depaint your aircraft professionally

When performing aircraft corrosion checks and paint modifications, it is important to choose consistent and reliable depaint and repaint systems with industry-leading OEM qualifications.

And how to improve it easily: with BONDERITE

There is a way to make the complex as easy as possible: Henkel's BONDERITE depaint technologies are NESHAP compliant, thixotropic products – solvent, hydrogen peroxide and water-based. They are easy to apply as they cling to vertical surfaces. Furthermore, they eliminate the surface contamination of mechanical removal methods.

Why choose BONDERITE paint strippers?

- > Reduction of material used, waste generated and overall costs
- > Reduction of total paint stripping time
- > Low to no odor, improved operator conditions
- > Meets leading OEM process specifications

BONDERITE paint stripper: Facts at a glance

Key factors to consider when choosing the right BONDERITE paint stripper

- > OEM process specification requirements
- > Metal surface
- > Stripping time
- > Environmental concerns and regulations

Applications

Henkel offers a complete portfolio of solvent, hydrogen peroxide and water-based products for aircraft depaint and repaint for the following applications:

- > Airframe structure
- > Hard to reach flap and wheel well areas
- > Landing gear and major component repair applications

Types of paint strippers

- 1. Regulated Methylene Chloride:
- Fastest stripping times
- > Safe on a majority of substrates

2. Environmentally Advantaged -Peroxide:

- Medium stripping times
- > Can be used on a majority of substrates

3 Environmentally Advantaged – Acid Activated:

- > Faster stripping times
- > Can be used on a majority of substrates

4. Environmentally Advantaged – Alkaline Activated:

- Slower stripping times
- > Safe on a majority of substrates

Objective of Surface Preparation -Aircraft prior to paint

- Produce a properly prepared surface clean, residue-free
- > Ready to accept primer
- Corrosion-free
- > Properly conversion coated

Effectiveness of paint stripper types

Depaint - Paint stripping process

Repaint - Metal pretreatment for spray application

100 ft² of aluminum surface when used under normal conditions.	

For proven engine maintenance solutions, trust Henkel's engine overhaul and compressor washer products:

BONDERITE engine cleaners

Engine maintenance: a matter of safety

In the interest of safety, many external considerations from regional regulatory agencies to engine OEMs / shop requirements contribute to and determine the appropriate engine maintenance protocol. Engine parts need to be professionally and thoroughly cleaned for effective Non-Destructive Testing (NDT) inspection and corresponding engine overhaul or parts replacement activities.

No compromises: BONDERITE engine cleaners

Providing one of the broadest portfolios in the industry, BONDERITE engine overhaul and compressor washers meet major OEM process specifications while being available globally. Whether you require an on-wing or off-wing solution, BONDERITE removes metal oxide scales, sulfadations and carbonaceous material. BONDERITE is highly cost-effective and provides reliable results – day by day.

Why choose BONDERITE engine cleaners?

- > Meet many OEM process requirements
- > Cost-effective with excellent rust and contaminant removal properties
- > Efficient scale removal properties
- > Total engine overhaul package solution

Engine Overhaul Process

Engine Cleaning Solutions (ST)

BONDERITE engine cleaners: Facts at a glance

Key factors to consider when choosing the right BONDERITE engine cleaner

- > Meets OEM qualified process requirements
- > Metal substrate
- Soil types (organic or inorganic)
- > Environmental concerns and regulations
- Disposal system compatibility

Engine cleaning sections

> On-wing cleaning - compressor washers

- > Bath life
- > Rinse conditions (procedures, steps, water availability)
- Transfer times
- > Special purposes applications like field repair
- > Off-wing cleaning engine overhaul
 - » Cold section
 - » Hot section

Key factors influencing the cleaning performance

- Product concentration
- Temperature
- > Time
- > Product agitation

- > Metal surface conditions
- > Contamination and age of bathing solution
- Rinsing
- Structural Adhesives (AA) Composite Materials (M&R) Composite Fan Composite Outlet Guide Vanes Containment Case Composite Low Pressure Compressor Composite Fan Blades Cleaning of Compressor's & Turbine's Blades Titanium Leading Bonding to Blades Abradable Fan Track Liner Low Density Fillers for Ice Repellent Liners Acoustic Fan Track Liner

Description		BONDERITE C-MC 5884 TM AERO is a concentrated liquid cleaner which effectively removes oil, salt and solid deposits from compressor blades, guide vanes and rotors of in-service jet engines. Periodic cleaning of these components is necessary to avoid power loss, abnormal temperature increases and increased fuel consumption.	BONDERITE C-MC 6783-10 TM AERO is an aqueous compressor cleaner which effectively removes oil, salt and solid deposits from compressor blades, guide vanes and rotors of in- service turbine engines. Periodic cleaning of these components is necessary to avoid power loss, abnormal temperature increases, increased fuel consumption and excessive NOx emissions. It is supplied in a ready-to- use liquid form.	BONDERITE C-MC 6783-50 TM AERO is a concentrated aqueous compressor cleaner which effectively removes oil, salt and solid deposits from compressor blades, guide vanes and rotors of in-service turbine engines. It is used at 20 percent by volume in distilled, demineralized or good drinking quality water. For cold weather (below 32°F / 0°C) add 20 percent by volume isopropanol, ethanol or glycol.
