

LOCTITE® DRI 2250-W

High Performance Pre-Applied Threadlocker
Improves Fastening Integrity for Automotive Seat Manufacturer

1 CUSTOMER CHALLENGES

- The automotive industry requires a high level of fastening integrity and durability validated by lifecycle testing.
- Due to variances in their fastener supply chain, the manufacturer was experiencing inconsistent lifecycle test performance with critical fasteners.
- They needed a pre-applied threadlocker to help overcome inconsistent fastener performance, and one that would work on contaminated zinc-flake plated fasteners.

2 HENKEL SOLUTIONS

- An environmentally friendly, water based pre-applied threadlocker that could perform equally as well on clean and contaminated fasteners.
- Maintain bolt clamp load across a broad range of service temperatures and high vibration loading.
- Offers excellent performance with good serviceability across many different fastener sizes.
