With LOCTITE 5884, Henkel provides the automotive industry with a high performance liquid dispensed polyacrylate compression gasket. This polyacrylate is especially suitable for powertrain applications such as engine and transmission components and can be cured within seconds at room temperature.
LOCTITE 5884 represents the next generation of cured-in-place liquid gasketing technology, designed specially to withstand modern powertrain conditions.

Henkel's dedicated technical resources provide assembly solutions on site to improve your product and productivity by offering:

- Design specification and testing
- Process setup and optimization
- Application equipment and system integration

**Benefits**

- Improved process reliability
- Automatically pre-applied on part
- No tooling costs
- Fast process: Ready-to-use in seconds
- User- and eco-friendly
- Improved compression set after 1000h aging (<50%)
- Cures at room temperature (no external energy necessary)
- Excellent oil resistance on transmission fluids and engine oils
- Excellent gas permeation resistance
- No oil foaming

**Typical Applications of LOCTITE 5884**

- Engine covers
- Oil pans
- Timing belt covers
- Oil pump
- Intake manifold

For full technical details please refer to the Technical Data Sheet.

**Process to integrate the gasket onto parts**

1. LOCTITE cured-in-place liquid gasket is dispensed onto the part.
2. LOCTITE cured-in-place liquid gasket is cured using UV light.
3. After seconds of curing, the part is ready to use.
